

PILOT  EFFICIENT

Guzzles people, not gas.

The Pilot, as its name might suggest, was designed to move large numbers of people safely and efficiently. As with all five Honda trucks, the Pilot is built on a unibody frame. Along with being safer, stronger, smoother and quieter-riding than traditional truck frames, a unibody truck is lighter, resulting in lower overall vehicle weight. It's just one of the reasons the Pilot is the most fuel efficient 8-passenger SUV on the road. And why Pilot was named one of Car and Driver's "5Best" trucks in 2006.
